

FIRING ON ALL CYLINDERS

DealerDOCX - Document Intelligence

Our solution improves dealership operational efficiency and the productivity of all dealership personnel. The platform allows for fast, secure, high-quality electronic document management.

Key Document Extraction & Assembling

Identify a certain page within unstructured documents, extract them and then assemble them together as one file. This feature is often used to help dealerships with extracting incentive documents for OEM audits, the user is then able to assemble the documents into one bundle and then provide it to the OEM, saving on average 40 hours and countless dollars.

Page Identification & Indexing

Finally found the page you were looking for in a file? Our Indexing feature allows you to save this page so that you can easily access it time and time again. Identifying key pages within documents and indexing them saves your staff countless hours of scanning through paper documents and making copies.

Compliance & Process Tracking

Our system is able to flag certain files/bundles that may be missing important information, or are simply incomplete. The tool will provide reporting to the user of any and all missing files so that you can update and complete them in a timely fashion. This allows for a streamlined approach if you are facing an audit while continuously ensuring that every aspect of your business is running smoothly.
